

JC-120 Jazz Chorus Amplifier

Continuing a great tradition.

It's been twenty years since the first Roland Jazz Chorus guitar amplifier made its appearance. With its astonishing "JC" chorus effects and distinctive clear, tonally pure sound, the JC amp has become an industry reference, maintaining its impressive qualities. The uncompromising sound quality, unique chorus, total dependability and rugged construction make for an amplifier that any guitarist around the world can have confidence in for musical self-expression.

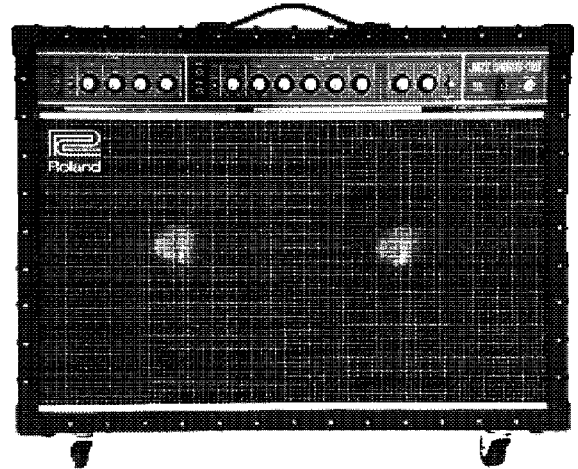

Independent twin-amplifier, twin-speaker configuration along with unique spatial chorus effects create the famous JC sound.

Hard fibre sections and rivets protect the amplifier edges and corner guards are also provided. The JC-120 features heavy-duty construction inside and out to withstand rough use onstage and on the road.

With the JC-120 amplifier, you can rely on getting all the tonal character of your guitar. That's because distortion is extremely low and frequency response accurate. It also helps ensure you get the best sounds your effects can produce.

JC-120

The long-time favorite JC-120 features twin 60W + 60W amps, two 12-inch speakers, and two input channels. As well as its distinctive JC chorus, the JC-120 also offers vibrato with rate and depth controls, mild distortion and clear reverb, all of which can be switched on/off with footswitches. The stereo effects loop on channel 2 meets full professional specifications so you can select series/parallel connections and switch between different input and output signal levels.

Specifications:

| | |
|-----------------------------|---|
| Output | 120W (60W+ 60W) |
| Speakers | 30cm (12) x2 |
